

RAC CISS

CONTINUOUS INTERNET SECURITY SCREENING

RAC CISS is a solution for continuous and proactive security of your company's Internet connections and network perimeters. Its core is the process of the periodic vulnerability testing, evaluation and remediation of ICT (Information and Communication Technology) devices and services accessible from the Internet. Part of RAC CISS is non-stop security help-desk providing customers with up-to-date security recommendations for detected vulnerabilities and current Internet threats to tested ICT.

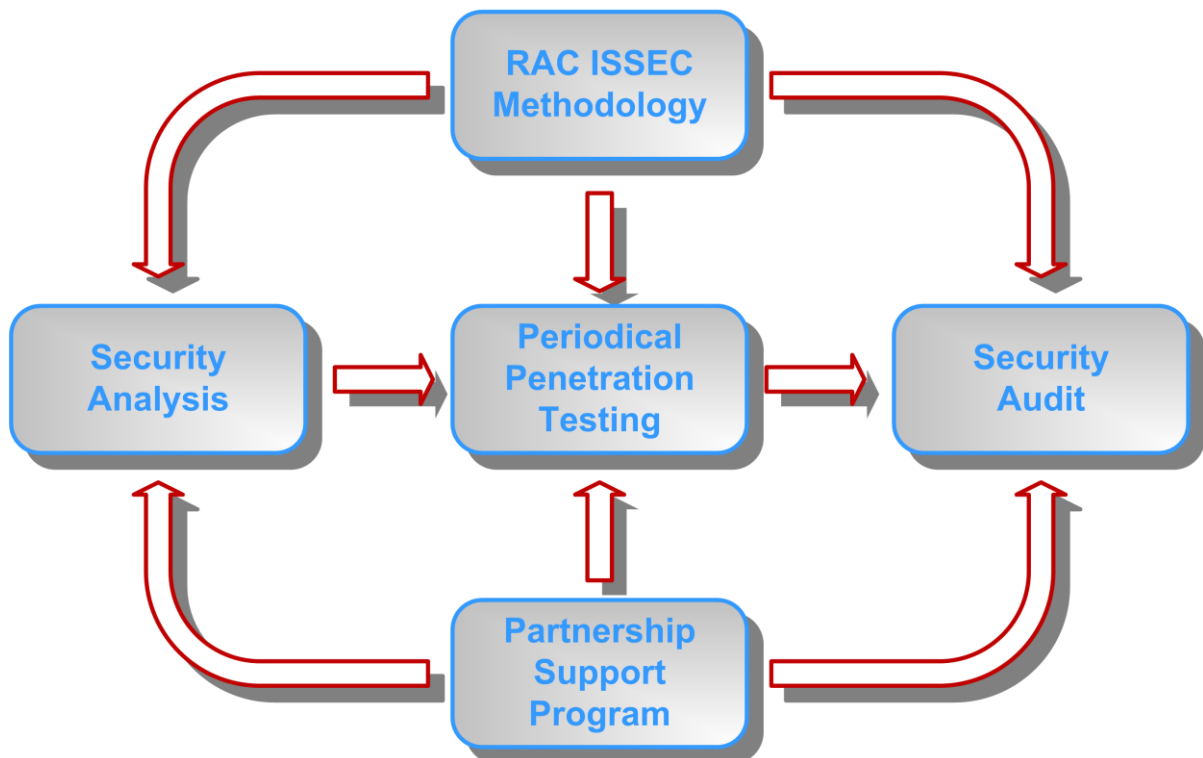

Continuous, preventive and proactive approach for security solutions of the Internet connections, operation of systems and internet services is a necessary prerequisite for ensuring their availability and confidentiality.

For most organizations it is ineffective to implement the required activities by their own resources. RAC CISS solution changes these activities into standard controlled process so that organization could focus on its core business and not to spend inadequate resources on supportive activities.

Solution tailored to client's needs

- ✎ **Testing frequency** can be adjusted in days, weeks or months depending on the importance of the systems.
- ✎ **Response time** of support and solving problems can be adjusted in days, hours or "on-line".
- ✎ **Scope of RAC CISS solution** or its parts can be set up individually, with regards to the client's environment, needs and objectives.

CONTINUOUS INTERNET SECURITY SCREENING

OVERVIEW OF SECURITY INTERNET INTERFACE AVAILABLE

RAC CISS Deliverables

- ▶ You will continuously know the current status and changes in availability and visibility of your systems, services as well as protocols from the Internet.
- ▶ You will have your systems periodically tested for known vulnerabilities and new threats from the Internet.
- ▶ You will know measures and solutions of found and identified threats and vulnerabilities in given response time.
- ▶ You will be continuously informed about new found vulnerabilities and potential threats to your systems and services as well as about new practices and technologies for their elimination.

RAC CISS Advantages

- ▶ You will save your resources from exhausting day-to-day security monitoring of new Internet threats and vulnerabilities.
- ▶ You will receive early warnings about new threats and vulnerabilities of your systems along with detailed descriptions on how to eliminate them before “script-kiddies” or “hackers” do their job.
- ▶ You will be able to make decisions based on actual and accurate information with our assistance.

Way of Implementations

- ▶ Using expertise, experiences and background of RAC’s 10 year history on market.
- ▶ Highly-specialized regularly updated tools for vulnerability assessment and testing.
- ▶ Access to a number of Info-Sec resources held by reputable institutions, partner organizations and ICT product vendors.
- ▶ RAC ISSEC methodology for interconnected, practical security examinations of ICT systems.
- ▶ Security analysis for initial review of systems and configurations. Optionally with detailed technical analysis of threats, vulnerabilities and countermeasures.
- ▶ Penetration testing for preventive vulnerability testing of systems’ resistance against hacker threats.
- ▶ Security audit for the final verification of systems status and implementations of countermeasures.
- ▶ Partnership support program for providing continuous assistance by personal service, email, or hot-line.
