

RAC Questor®

Advanced Analytical Toolset

The **RAC Questor®** methodology and set of tools forms a sophisticated environment satisfying the needs of organizations that require information about the state of the organization in different areas for the support of management and control processes.

The basis of **RAC Questor®** is an integrated environment for the creation and filling out of prepared questionnaires and their subsequent evaluation, which includes execution of professional conclusions and relevant recommendations, all together generating a **professional system of support for questionnaire surveys**.

The **RAC Questor®** environment is used both for **filling out forms** of a particular questionnaire and for their **evaluation**. The basic structure of the questionnaire, containing hierarchically structured **questions, answers and evaluations**, produces a thematic unit (**Q-Module**), which is supported by other components such as **help, notes and guidelines**.

A sophisticated environment for the support of management and control processes within an organization

Main contribution

- ◆ improved **organization and automation** of data collection for decision making
- ◆ more efficient **creation, distribution and collection** of questionnaires
- ◆ enhanced **usability of the questionnaires** compared to traditional paper format
- ◆ higher **quality** output of information
- ◆ better quality **assessment** reports
- ◆ higher degree of **objectivity** of assessment conclusions

Module structure

RAC Questor® Standard. This multi-user version enables the creation, filling out and evaluation of the forms as well as the creation of final reports. Q-Standard enables the import of empty and export of completed forms. It also contains a system to administer users, organizations and individual Q-Modules.

RAC Questor® Expert. This version extends Q-Standard with the option to create customized forms and report templates. The central evaluation feature is the main augmentation of this version.

RAC Questor® Developer. This version is aimed at user who want to build and maintain their own Q-Modules from scratch or modify Q-Modules acquired from other users or organizations. This is our most complex version and includes all possible features.

RAC Questor® ASP. This module (application service provider) is meant to create a distribution environment for sharing the RAC Questor environment in wide area networks (Internet, Intranet) enabling effective and secure access to information and providing information sharing between licensees.

Key features

Tool flexibility. RAC Questor is available in three versions (for development, central evaluation, and independent work) answering the needs of customers and their reasons for use.

Modularity of environment. The tool's environment can only contain temporarily needed questionnaires with the possibility of their immediate distribution and collection of relevant responses.

Sophisticated interface. The tool's interface contains a fast and easy way to display (tree data window) and connect (drag and drop) individual parts of the Q-Module.

Professional evaluation. The tool supports creation of relevant assessments directly derived from the answers. Individual relationships between the answers and conclusions can be set both for quantitative and qualitative evaluation.

Extensive outputs. An integral part of the tool is a number of output reports (overview and detailed) in a variety of formats (Excel, Word, etc.) for documenting questionnaire content, their completion and subsequent evaluation (textual and graphical).

Integrated help. Every important component (question, answer, conclusion) of questionnaire can be supplemented by appropriate help notes, which are presented to the respondent when filling out the questionnaire.

Security distribution. The secure (encrypted) way of transmission, based on the license scheme, is used between individual workstations for information export and import.

Multi-user platform. The software environment may be securely shared and used between an unlimited number of users and organizations.

Risk Analysis Consultants, s.r.o. is the creator and purveyor of the license for use of the RAC Questor® complete system of support for analytical questionnaire surveys.
